SKILLS

ML & AI

Python	TensorFlow
PyTorch	Scikit-learn
HuggingFace	LightGBM
XGBoost	SHAP
MLflow	

Data Engineering

Spark	PySpark
Kafka	Airflow
dbt	PostgreSQL
Snowflake	Selenium

Backend & Infra

FastAPI	Django
Docker	Kubernetes
AWS	GCP
Git	CI/CD

Analytics & BI

SQL	Power BI
Tableau	A/B Testing
Pandas	Matplotlib
Excel	

EDUCATION

BTech, Statistics

Ladoke Akintola University of Technology
2021 – 2025

CERTIFICATIONS

AWS Certified ML Specialty

[Year]

GCP Professional Data Engineer

[Year]

TensorFlow Developer Certificate

[Year]

DeepLearning.AI MLOps

[Year]

LANGUAGES

English — Professional proficiency
Yoruba — Native

AVAILABILITY

- ✓ Remote
- ✓ Hybrid
- ✓ Freelance
- ✓ Relocation

PROFESSIONAL SUMMARY

Senior Data Scientist and ML Engineer with 3 years of end-to-end experience across fintech, healthcare, e-commerce, and real estate. Specialises in production-grade ML systems, scalable ETL/ELT pipelines, and backend APIs that turn raw data into actionable decisions. Proficient across the full ML lifecycle using Python, TensorFlow, PyTorch, Spark, Airflow, dbt, FastAPI, and Django on AWS and GCP. Open to remote, hybrid, freelance, and relocation opportunities globally.

WORK EXPERIENCE

Senior Data Scientist & ML Engineer

2022 – Present

[Company Name] · [Industry]

- Built real-time fraud detection pipeline processing [X] transactions/day at sub-100ms latency using PySpark, FastAPI and Airflow — reducing fraud losses by [X]%
- Deployed LightGBM churn prediction model with SHAP explainability via Power BI dashboard, increasing retention intervention rate by [X]% and improving customer lifetime value
- Engineered clinical data pipeline using Kafka + dbt, cutting weekly reporting from [X] hours to under 30 minutes with zero missed quality failures in production
- Developed XGBoost property valuation model replacing manual appraisals — accuracy within [X]% of sale price; turnaround reduced from [X] days to under 2 minutes

Data Analyst & Engineer

2021 – 2022

[Company Name] · [Industry]

- Designed ETL pipelines consolidating data from [X] sources into a centralised PostgreSQL warehouse, improving analytics team data availability
- Built Power BI and Tableau dashboards adopted by [X] stakeholders for weekly KPI tracking and strategic decision-making
- Ran A/B tests on [X] campaigns generating insights that drove [X]% improvement in conversion rates

KEY PROJECTS

Fraud Detection Pipeline

Fintech

Real-time transaction fraud detection at sub-100ms latency at scale.

Python	PySpark	FastAPI	Airflow
Docker	PostgreSQL		

Customer Churn Prediction

E-commerce

Behavioural ML model with SHAP explainability giving weeks of advance warning.

Python	LightGBM	SHAP	dbt
Power BI	PostgreSQL		

Clinical Data Pipeline & Risk Scoring

Healthcare

Multi-source ETL + patient risk scoring; reporting cut to under 30 min/week.

Kafka	Airflow	dbt	Scikit-learn
FastAPI	PostgreSQL		

Property Valuation Model

Real Estate

Automated valuation model; turnaround from days to under 2 minutes.

Python	XGBoost	Selenium	Django
GeoPandas
